LEAHY-WOLF AUTOMOTIVE FLUIDS

Auto Transmaster GD-3

Leahy-Wolf Auto Trans Master lubricant is a reliable transmission fluid for a variety of service vehicles. This DEXRON®-III, MERCON®, and MERCON® V performer is excellent for use in automatic cars and trucks as well as power shift transmissions. This versatile product is approved against major industry transmission requirements such as GM, Allison, Caterpillar, and Ford. The superior resistance to oxidation ensures deposit-free performance and a long service life. This fluid works in a wide range of operating temperatures. Due to superior frictional characteristics, Leahy-Wolf Auto Trans Master GD-3 provides smooth shifting with excellent protection against component wear. A versatile performer, this transmission fluid is multi-functional, excellent in low temperatures, resists thinning at high operating temperatures, and inhibits foaming and aeration.

ADVANTAGES:

- Exceptional frictional characteristics
- Excellent low-temperature flow
- Versatile performer in all temperatures
- Reduces sludge and varnish build-up
- Compatible with conventional transmission seals
- Prevents slippage
- Longer service intervals due to oxidation resistance
- Inhibits foaming and aeration
- Meets all industry transmission requirements

Typical Characteristics & Applications

TYPICAL CHARACTERISTICS:

Appearance	Red Liquid
Specific Gravity @ 15.6/15.6°C	0.858 typical
Weight per gallon (USA), lbs.	7.14
Viscosity @ 100°C, cSt	7.4
Flash Point, °C (PMCC)	150 minimum

APPLICATIONS:

Allison Transmission	C-4,
General Motors	DEXRON®-III (H)
Ford Motors	MERCON®, MERCON® V
Caterpillar	TO-2

FOR USE IN:

ZF, Voith, Chrysler, Honda/Acura, Toyota, Nissan, VW/Audi, BMW, Hyundai, Mitsubishi, Mercedes-Benz, Saturn, Jeep.

*DEXRON®-III and MERCON®/MERCON® V are registered trademarks for General Motors Corporation and Ford Motor Company, respectively.

Leahy-Wolf Auto Trans Master GD-3 provides smooth shifting with excellent protection against component wear. A versatile performer, this transmission fluid is multi-functional, excellent in low temperatures, resists thinning at high operating temperatures, and inhibits foaming and aeration.

Problem:

We're putting in long hours over the summer, and can't afford downtime for any of our key heavy equipment, let alone our service vehicles. It seems we've had our pick-ups in for service a lot lately due the transmissions over-heating. High temperatures, heavy loads and constant shifting have created problems in our transmissions.

Solution:

Leahy-Wolf Auto Trans Master GD-3 is designed with additives that resist oxidation and foaming which maintains the integrity of the transmission fluid. Deposits and foaming are minimized allowing for smooth shifting and long-term operations.
